FURNACE FILTER REPLACEMENT

It's time to change your furnace filter!

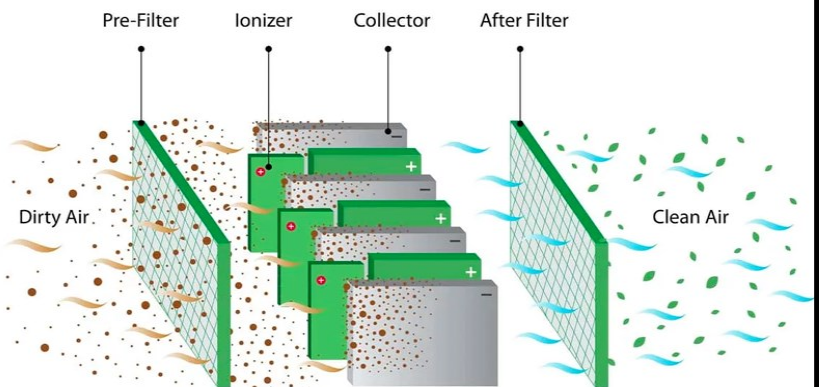

Due to COVID-19, we are asking each member to replace their own filter. We will be delivering the filter on the week of August 10th together with instructions.

REPLACEMENT INSTRUCTIONS:

- If you are looking at a furnace filter, find the arrow that indicates the proper air flow direction. That arrow must always face toward the furnace and away from the return duct that carries the air in need of heating or cooling.
- If you notice the old filter is damaged or bent out of shape (concave), please call the office.
- There will be an instructional video on our website under the maintenance tab.

Please call us if you need help or unable to replace it yourself.

We are here to help YOU!
